

You are cordially invited to attend
**The Grand Opening
of Santa Monica's
Renewable Hydrogen
Vehicle Fueling Station**

Thursday, June 15, 2006

11 a.m. until Noon

at Santa Monica's City Yards

2500 Michigan Avenue, Santa Monica 90404

(right off the Interstate 10 @ Cloverfield Blvd.)

Light refreshments will be served

This new facility is another milestone in Santa Monica's quest for clean air and sustainability. The project will demonstrate the safety and practicality of hydrogen as a municipal fleet vehicle fuel. Housing one of five stations in the South Coast Air Quality Management District's five-city hydrogen infrastructure program, the City of Santa Monica uniquely uses renewable energy sources to power its onsite hydrogen generation system. Since the hydrogen-powered vehicles' exhaust is virtually pure water vapor, Santa Monica is demonstrating the promise of a pollution-free energy economy.

Special Thanks to our Project Partners

South Coast Air Quality Management District

U. S. Department of Energy

Air Products and Chemicals, Inc.

Quantum Technologies, Inc.

Please RSVP by Monday, June 12th via
